

PROFESSIONAL SUMMARY

Full-stack software engineer with 4+ years of experience specializing in backend and systems engineering. Deep expertise in Rust, TypeScript, and blockchain ecosystems, building high-performance REST APIs, decentralized applications, and production-ready infrastructure. Active open-source contributor across the Starknet and Stellar ecosystems, with a track record of designing scalable backend services (Axum, NestJS, Express) and secure smart contracts (Solidity, Cairo, Soroban). Currently open to full-time backend / full-stack opportunities.

TECHNICAL SKILLS

Languages	Rust, TypeScript, JavaScript, Python, Solidity, Cairo
Backend & Systems	Axum, NestJS, Express.js, Node.js, Django REST Framework, RESTful API Design, Systems Programming, Microservices
Frontend	React, Next.js, Tailwind CSS
Blockchain & Web3	Smart Contract Development, Ethereum (EVM), Starknet, Stellar/Soroban, dApp Architecture
Databases & Infra	PostgreSQL, Supabase, Redis, Docker, Render, DigitalOcean, Vercel
Tools & Practices	Git/GitHub, CI/CD (GitHub Actions), Prometheus/Grafana, Code Review, Testing, Technical Documentation, Debugging

WORK EXPERIENCE

Software Engineer · Studly (Remote) Present

- Build backend systems and developer tools for a social-first, collaborative e-learning platform used by students to study, practice, and share knowledge.
- Built the backend for the platform's community feed feature using Rust and Axum, powering real-time knowledge-sharing and peer engagement.

Backend Lead & Co-Founder · Web3Novalabs 2024 - Ongoing

- Co-founded and lead backend development for PayMesh, an automated on-chain group-payments protocol on Starknet; designed REST APIs for authentication, payment processing, and transaction management using Rust and Axum, with RBAC and encryption for sensitive data.
- Maintain PrediFi, an open-source, on-chain prediction market protocol on Stellar (Soroban); drive core protocol development (pool lifecycle, RBAC, arithmetic/reentrancy security audits, Pyth oracle integration) and review external contributions.

Backend Engineer, NestJS · Agromart

- Built and maintained product-resource endpoints and analytics-dashboard APIs for an e-marketplace backend.
- Debugged backend issues in collaboration with another engineer, improving system reliability, and contributed to technical documentation and regular code reviews.

Blockchain & Web3 Trainee · Collab (with Blockheaderweb3) Mid-2024 · 4 months

- Completed an intensive, hands-on program covering blockchain fundamentals and smart contracts alongside backend development with Django REST Framework and a React refresher.

FEATURED PROJECTS

PrediFi — Decentralized Prediction Market Protocol (Stellar / Soroban) 23 ★ · 206 forks
github.com/Web3Novalabs/predifi

Open-source, on-chain prediction market protocol where market logic, staking, resolution, and payouts run entirely through modular Soroban smart contracts, including automated price-based resolution via Pyth oracle integration. Actively maintain the protocol — reviewing contributions and driving pool-lifecycle, access-control, and security-audit work.

Rust · Soroban · Next.js · TypeScript · Tailwind CSS

PayMesh — Automated On-Chain Group Payments (Starknet) paymesh.app
github.com/Web3Novalabs/PayMesh

Removes the friction of manual crypto payouts: each group gets its own child smart contract, and any payment sent to the group address is automatically split and distributed per preset rules, fully on-chain. Co-founded the project and built the backend.

Cairo · Starknet · Rust · Axum · Next.js · TypeScript

Fireflow — Field Operations Tracking App 2026
Operations application that lets field workers track tasks in real time.

Kotlin · Express.js · Supabase

AgroMart — E-Marketplace for Fresh Produce
agromart.thebuidl.xyz
Digital marketplace connecting buyers with fresh produce and food items. Built the NestJS API layer powering marketplace functionality.
NestJS · TypeScript

OPEN SOURCE CONTRIBUTIONS

- github.com/Akshola00 · 69 repositories · 53 ★ given · Starstruck, Pull Shark x3, Pair Extraordinaire
- Mediolano** (Starknet IP protocol) — profile / settings refactor
 - StakCast** (Starknet prediction market, 9★/33 forks) — comprehensive test suite and a token-faucet test utility
 - Fundable Protocol** (Starknet payment streaming / crowdfunding, 3★/37 forks) — added multi-asset donation-token support
 - Stellar Unified Price Oracle** (Soroban oracle contract) — Dockerfile, debug module, test helpers

EDUCATION

Professional Diploma, Software Engineering · National Institute of Information Technology 2023 - 2025
